

## **What will the world be like in the 2050s?**

Please let me talk about the world of the 2050s from the three viewpoints of environmental problems, social problems, and technology.

There is the issue of global warming as a representative environmental problem.

I predict an increase in global warming. People all over the world will suffer heavy damage from the flood and the drought. It is not only human beings that suffer the damage of global warming. Many plants, animals, and insects may become extinct if they cannot adjust to the change of the climate.

We will also have to respond to the aging of the world's population as one of the social problems. Japan is one of the countries that are rapidly aging. I think that the importance of nursing care for the aged will rise more and more. So I think that medical students who work as doctors in the future are demanded to have more interest in geriatrics now.

In the 2050s, there will be great progress in technology and we will be able to make the impossible come true. I guess that we will live together with robots and robots will replace human beings in jobs, sports, and other fields. Possibly, I will even work with robots in the hospital.

In this way, we will make substantial advances in every way, but at the same time we will also create even greater problems in every way. I have some concerns about the world in the 2050s, but I hope only that it is a peaceful world.
